Item 1:

- We have changed the composition Finder-> Warranty because warranty can exist by itself.
- 2) We have changed the composition Finder-> Category because category can exist by itself.
- 3) We have changed navigability Message -> Actor (send). The direction was wrong.
- 4) We removed the attributes sender and recipient from Message because just with the navigability is understandable, which means that is scaffoding.
- 5) We have changed the multiplicity Report-Complaint 0..*->0..* to 0..*-> 1 because the same report can not be in different complaints.
- 6) We have changed multiplicity Complaint-FixUpTask 0..*->0..* to 0..*-> 1 because the same report can not be in different fixUpTasks.
- 7) We have changed multiplicity FixUpTask-Application 0..*->0..* to 1-> 0..* because the same report can not be in different fixUpTasks.
- 8) We have changed multiplicity Report-Referee 0..*->1..* to 0..*-> 1 because it makes no sense that a report may have several referees.
- 9) We have changed multiplicity User Account-Actor 1..*->1 to 1-> 1 because it makes no sense that an actor has several users accounts.
- 10) We have changed multiplicity FixUpTask-Category 1->1 to 0..*-> 1 because a category can have zero or many FixUpTasks.
- 11) We have changed multiplicity FixUpTask-Finder 0..*->1 to 0..*-> 0..* because it makes no sense that a FixUpTask may have just one Finder.
- 12) We have changed the composition Finder-> Configuration. We have changed the multiplicity because of scaffolding.
- 13) Navegability Message Actor was not specified.
- 14) We removed the phone pattern because we do not need it.
- 15) We changed the ticker pattern because it was wrong
